Summary

Data Scientist with hands-on experience in building end-to-end machine learning solutions, from data analysis and feature engineering to model development and deployment. Strong in statistics, machine learning, deep learning, MLOps and delivering reliable, reproducible, and production-ready systems.

Technical Skills

- Data Analysis: Python (Pandas, NumPy), Scraping (Selenium, BeautifulSoup), Excel.
- Data Visualization: Python (Matplotlib, Seaborn, Plotly), Power BI, Tableau.
- Databases: MySQL (Query Optimization, Data Extraction)
- MLOps & Deployment: FastAPI, Docker, MLflow, DVC, CI/CD, AWS (EC2, S3, ECR, CodeDeploy).
- Machine Learning: Scikit-learn, Feature Engineering, Model Evaluation, Fine Tuning.
- Deep Learning: NLP, PyTorch, TensorFlow, OpenCV.
- Statistical Analysis: Hypothesis Testing, Descriptive Statistics, Data Distributions.

Projects

PulseCore: A Chrome Extension for YouTube Comment Sentiment Analysis

[GitHub](#)

Python, Machine Learning, FastAPI, Docker, MLflow, DVC, AWS(S3, EC2, ECR, CodeDeploy), CI/CD

- Built a Chrome extension that analyzes YouTube comments and provides creator-focused insights including sentiment distribution, word cloud, top comments, monthly sentiment trends.
- Developed a FastAPI backend that fetches comments using the YouTube Data API, preprocesses text, and predicts sentiment (Positive, Neutral, Negative) using a LightGBM model.
- Implemented an end-to-end MLOps pipeline with DVC for data and pipeline versioning, MLflow and DagsHub for experiment tracking and model registry, and automated model promotion to Production.
- Designed CI/CD pipelines using GitHub Actions for model training, testing, Docker image creation, and deployment to AWS using ECR, EC2, CodeDeploy, and Auto Scaling.
- Added automated API and service tests using pytest and containerized the application with Docker for reproducible and production-ready deployment.

Real Estate Decision Support System

[GitHub](#)

Python, Scraping, Cleaning, Data Analysis, Feature Engineering, Machine Learning, Streamlit

- Designed and built a real estate decision support system to help first-time and non-technical buyers make data-driven purchasing decisions instead of relying on intuition.
- Developed an Analysis Module to present market trends, pricing patterns, and key insights using intuitive visualizations.
- Built a Price Prediction Module to estimate property price ranges based on user-selected features and budget constraints.
- Implemented a Recommender System and Analytics Module to suggest similar properties and explain the key factors influencing prices.

End-to-End Financial Fraud Case Study and Solution

[GitHub](#)

Python, Pandas, NumPy, Data Analysis, Scikit-learn, LightGBM, SHAP, Machine Learning

- Built an end-to-end financial fraud detection system on 6.3M+ banking transactions, focusing on fraud behavior analysis, money-flow patterns, and explainable machine learning.
- Performed EDA, feature engineering, handled extreme class imbalance, optimized probability thresholds, and applied SHAP explainability to support decision-making.
- Reduced fraud leakage from 100% to 7% by blocking the majority of fraudulent transactions.
- Detected 93% of fraud cases while maintaining 98% precision on blocked transactions, minimizing false customer blocks.

Experience

- Data Analyst Intern (Task-Based) | Cognifyz Technologies (Remote)**

Jan 2024
- Worked in a task-based data analytics internship applying Python-based analysis techniques on real-world restaurant datasets.
 - Performed exploratory, descriptive, and geospatial analysis to identify patterns across ratings, cuisines, cities, countries, and geographic locations.
 - Analyzed price ranges, service availability (table booking, online delivery), and customer preferences to compare rating behavior across categories.
 - Applied feature engineering, predictive modeling, and data visualization by building and evaluating regression models and visualizing feature–target relationships.

Education

B.Tech in Computer Science and Engineering	2022–2026
Bansal Institute of Research Technology and Science, Bhopal	CGPA: 7.16/10
Senior Secondary (12th Grade)	2021–2022
Govt. Higher Secondary School, Baktara	89%
Secondary (10th Grade)	2019–2020
Maa Sharda High School, Baktara	93.75%

Certifications

Data Science Mentorship Program | CampusX

300+ hours | Python, Data Analysis, SQL, Power BI, Tableau, Statistics, Machine Learning, MLOPS

[Certificate](#)
